Cardiology

Shaping Cardiology Services with Accessibility and Compassion

Cardiac conditions complicate many of your patients' lives. Sometimes, patient education, lifestyle modifications and pharmaceutical interventions are just not enough. **When your patients need cardiac care, we're here to help.** We're shaping cardiology services in your community with compassion, accessibility and excellence.

Cardiac Care in Your Community

We all know the heart is vital to overall health, but maintaining cardiac wellness can be challenging. Our fast-paced lives make eating healthy, exercising and reducing stress complicated. Yet, as a medical provider, you understand how integral heart health is.

When heart problems **require more than diet modifications, exercise plans and medication therapy, you can count on us** for compassionate cardiac care. We provide a variety of interventional treatments and procedures.

Cardiac Catheterization and Vascular Lab

Our **cardiac catheterization lab offers stents and interventional peripheral procedures** to treat cardiac infarctions. Non-ST Elevated Myocardial Infarctions (Non-STEMI) often cause some degree of vascular blockage, reducing oxygen supply to the brain and body. Our cardiac cath lab specialists are here to help reduce adverse outcomes and improve the lives of the people in your community.

We offer a broad range of vascular services, procedures and tests to help make informed decisions and personalized care plans. Services include:

- Echocardiography
- Nuclear Cardiology
- Stress Testing
- Pacemaker Clinic
- Pacemaker/AICD

- Implantation
- Peripheral Interventions
- Electrophysiology & Atrial Fibrillation
- Coronary Angiograms
- Coronary Intervention
- 24/7 STEMI Coverage
- Lipid (cholesterol disorder) Clinic
- Peripheral Angiograms
- Ankle Brachial Index
- Cardiac Rehab

Maintaining heart health requires ongoing attention and purpose-driven therapies. Supporting you and your patients is what we do. So, we are proud to provide inpatient and outpatient cardiac care and rehabilitation right around the corner.

Our Commitment to Excellence

Our facility and medical staff are dedicated to maintaining high standards of cardiac services. Specifically, we are committed to:

1. Maintaining current best practices.
2. Using appropriate surgical approaches.
3. Committing to the gold standard of post-procedural care.
4. Committing to improving patient outcomes.

Our cardiology team prioritizes patient-centered therapy and is dedicated to holistic, personalized interventions. Our facility and staff's **devotion to excellent, compassionate patient care is the foundation of our success.**

Accredited Chest Pain Center

Community Medical Center is accredited as a Chest Pain Center by the American College of Cardiology (ACC) Accreditation Services. Community Medical Center has demonstrated expertise in quickly assessing, diagnosing and treating patients experiencing chest discomfort or pain, and is the only hospital in Western Montana to achieve the Chest Pain Center designation.

Your Cardiology Team

Our highly skilled, understanding cardiologists have training in a variety of cardiac care services that promote prevention, detection, treatment and recovery. We are dedicated to providing imaging, tests, and procedures that help you become maximally effective.

We understand how necessary collaboration and cath lab resources are for medical providers who are on the frontlines of patient care. Our medical staff will **work closely with you and your patient to create the best treatment plan** because we want to help you succeed and your patient get back to living life fully.

Imaging

Quality Imaging Services That Are Accessible

Modern medicine depends on radiology and imaging services for establishing informed treatment plans. As a medical provider, you need resources that support your practice. Our facility provides **accurate, dependable and convenient imaging resources** for you and your patients.

Reliable Radiology Services

Radiology testing uses radiant energy to take pictures and visualize many body parts. Our radiologists use these tests to determine a diagnosis and evaluate treatment. Here are some of the tools and tests we use to help establish care plans for your patients.

Mammography

Mammography is an X-ray used to detect and diagnose breast concerns. With **equipment dedicated to these breast exams**, we provide high-quality, low-dose radiation to evaluate breast problems, such as a lump, pain or nipple drainage.

Nuclear imaging

Nuclear imaging is **one of the least invasive and most detailed scans** for diagnosing and monitoring various treatments. This safe and effective testing utilizes a radioactive tracer for clear visualization. A medical professional typically administers the tracer intravenously.

Your patients may be concerned about the terminology “nuclear” or “radioactive,” but patients need to understand that this test is safe, effective and has no side effects. Additionally, the amount of radiation administered is minimal. Common conditions that can benefit from nuclear imaging are the following:

- Blood disorder
- Thyroid disease
- Heart disease

- Gallbladder disease
- Lung problems
- Bone issues
- Kidney disease
- Cancer

After the tracer collects in the tissue, a radiation detector produces digital signals, which are stored on a computer and can be generated to film. Our facility is committed to establishing a safe environment, and *our radiologists are available to answer any questions.*

CT scan

CT Services at Community Medical Center offer a vast array of procedures. In computed tomography (CT) scanning, x-rays obtain image data from different angles around the body and then a computer processes this information to show a cross-section of body tissues and organs. Although the technology is used to diagnose many different types of diseases, heart motion has historically made it challenging to achieve accurate CT images of blood vessels, also called coronary angiograms. With the advent of the most advanced form of this imaging — the 64-slice CT — patients may experience a new type of less invasive heart study. This is why Community Medical Center offers the General Electric 64-slice VCT CT scanner to meet your every CT imaging need.

MRI

Magnetic resonance imaging (MRI) uses magnets and radio waves, processed by computers, to generate images. This noninvasive test utilizes a large, tube-shaped magnet to create cross-sectional images of organs, tissue and the skeletal system. Our knowledgeable radiologists often use this **imaging tool for diseases that CT scans don't detect.**

Ultrasound

An ultrasound, or sonography, produces high-intensity sound waves to visualize structures within the body. This safe and effective test **does not use any radiation.**

We often think of ultrasound during prenatal care. Besides monitoring the uterus, ovaries, and embryos during pregnancy, this test can be used for many other reasons.

- Diagnose gallbladder disease

- Evaluate blood flow
- Guide needles for biopsy or treatment
- Visualize breast lump
- Examine thyroid gland
- Check genital or prostate problems
- Assess joint inflammation
- Determine bone disease

Our well-trained and personable sonographers understand how to manipulate this technology and can put your patients at ease.

X-ray

Our medical staff uses X-rays, or radiographs, for a wide range of injuries, diseases and disorders. Your patients can receive radiographs with or without contrast. Though this test uses a small amount of radiation, it is considered **safe for all ages, including babies**. However, pregnant women should avoid X-rays as they can harm the growing embryo.

Meet Your Team

Radiology testing has become commonplace for medical professionals. We depend on detailed imaging to make informed diagnoses and treatment plans. However, our team understands that tests can cause fear and anxiety for your patients. That's why we're committed to listening and providing compassionate care.

Our radiology specialists provide a wide range of imaging procedures. We aim to deliver **detailed imaging** to your practice while providing your patient with a **kind and caring experience**. Our radiologists and technologists are truly extraordinary.

Interventional Pain

Pain Management Services: Making a Tangible Impact

Nearly 21% of Americans endure chronic pain.* This discomfort can impact mobility, mood, ambitions and overall quality of life. Patients frequently ignore aches, taking on a “grin-and-bear-it” mentality. They often wait until the discomfort becomes debilitating to get help. Your patients need to know that there’s a better way. Pain management services allow your patients to enjoy a life with less painful interruptions.

Traditional pain management

Traditional pain management uses pharmaceuticals and offers a viable solution to urgent problems. However, these strategies must be managed with the utmost consideration. We take a conservative approach to traditional pain management. **Our specialists strive to reduce pain while also considering the potential long-term effects.**

Certain antidepressants and anticonvulsants are proven to reduce chronic and neuropathic pain. Additionally, we have observed incredible results from using NSAIDs and the ERAS protocol. That’s why we take a holistic approach to pharmaceutical pain management and use opioids when necessary.

Interventional pain management

Interventional pain management targets the pain at its source. It uses image-guided techniques and minimally invasive procedures. We are proud to offer the following interventional pain management approaches:

- **Targeted injections:** Precise medication delivery can reduce inflammation and prevent pain signaling.
- **Nerve blocks:** These medications numb and inhibit pain signals from a compressed nerve.
- **Radiofrequency ablation:** This technique utilizes heat energy to disable the nerve’s pain signals.
- **Pain pumps:** These implanted devices deliver medication directly into the spinal fluid.
- **Spinal cord stimulation:** These implantable devices use adjustable electrical currents to disrupt pain signaling. Patients alter the electrical currents using a handheld device.

With these innovative strategies, pain specialists boast improved results with fewer side effects.

Chronic pain management

Chronic pain lasts three months or more. Approximately **52 million individuals report chronic pain**. Some common causes include:

- Nerve damage
- Arthritis
- Osteoporosis
- Autoimmune disorders
- Injury
- Headaches
- Cancer

No two patient's pain experience is precisely the same. That's why patients with chronic pain need a personalized plan. For many of these patients, a single approach is not sufficient. They require a more thorough strategy.

Managing chronic pain requires a multidisciplinary approach. *By combining diverse treatments, patients maximize their results.* We utilize a variety of treatment modalities to address the multifaceted aspects of chronic pain.

Why choose us for pain management services?

Daily pain disruptors significantly impact mobility, mental health and overall quality of life. **Our pain management services allow patients to find relief and reclaim their lives.** We provide innovative strategies while addressing pain at its source. When partnering with us, your patients have access to the following specialists:

- Interventional radiologist
- Anesthesiologist
- Pain doctor
- Neurologist
- Physiatrist

Our multidisciplinary team is attentive to your patient's individualized needs. We incorporate pharmaceuticals, minimally invasive procedures and alternative therapies to help patients find the plan that works for them. By partnering with us, your patients receive evidence-based care that enhances their lives. We would be honored to be *your partner in care*. Click the "Refer" button to get started today.

Limb Preservation

Preventing Amputations Through Early Interventions

Lower-limb amputations account for the vast majority of all amputations, and diabetes – specifically diabetic foot ulcers – is the leading cause of nontraumatic lower-limb amputations in the U.S. Unfortunately, the rate of amputation is increasing. We are here to change that.

Our Limb Preservation Program is the first of its kind in Montana, focusing on amputation prevention. Our program offers early intervention to help patients maintain as much mobility and function as possible, with the goal of avoiding amputation and promoting health to prevent future issues.

Conditions Treated

- Diabetic wounds / Chronic non-healing wounds
- Critical Limb Ischemia / Chronic Limb-Threatening Ischemia
- Peripheral Arterial Disease (PAD)
- Venous insufficiency
- Bone infections
- Severe infection/gangrene
- Neuropathic ulcers
- Other limb-threatening forms of trauma, wounds, lymphedema or vascular conditions

Treatment

A nurse navigator works closely with our team of specialists to manage care, coordinate referrals and assist with insurance authorizations as needed. Patients benefit from multidisciplinary expertise in cardiology, wound care, podiatry, endovascular surgery, interventional radiology, orthopedics, plastic surgery, and/or physical medicine & rehabilitation. With early interventions, our team can help patients avoid or minimize amputation. Treatments include:

- Peripheral Angiography
- Peripheral Intervention
- Endovascular surgery for arterial revascularization

- Wound debridement
- Hyperbaric oxygen therapy
- Hospital admission to facilitate care (IV antibiotics, MRI, accelerated workup)
- Ankle-brachial index
- Arterial duplex
- Soft tissue reconstruction
- Flap surgery
- Microvascular Surgery
- Bone Reconstruction

While our team is committed to doing everything we can to prevent amputation, sometimes, that outcome is unavoidable. If amputation is required, we work closely with surgical specialists in the area to get patients the care they need and will continue to assist with rehabilitation, prosthesis fittings and follow-up appointments.

Nephrology

Kidney Care: Supporting Patients with Advanced Nephrology Services

The kidneys' extensive filtration system is essential in maintaining health. Daily, the kidneys filter all of the body's blood, about 200 quarters.* These fist-sized organs tirelessly remove waste, regulate blood pressure and balance hormones. The renal system works hard to keep the body healthy and regulated. So, when kidney function falters, the whole body feels the effects.

We understand the challenges you face when managing patients with kidney conditions. We know advanced nephrology services are important to you and your patients. That's why we invest in innovative technology and experienced kidney specialists.

What kidney conditions do you specialize in?

Chronic kidney disease (CKD) impacts the lives of an estimated 35.5 million Americans.* Diabetes and high blood pressure are the leading causes of kidney failure. Our nephrology services address a variety of kidney-related conditions, including:

- Cystic kidney disease
- Diabetic kidney disease
- Hypertension
- Kidney stones
- Kidney infections or injury
- Urinary tract infections (UTIs)
- Nephrotic syndrome
- End-stage renal disease (ESRD)
- Hemolytic uremic syndrome
- Hyponatremia and other electrolyte disorders
- Toxic overdose
- Glomerulonephritis
- Polycystic kidney disease

A kidney condition doesn't just impact the renal system. The ripple effects are far-reaching. It can have serious implications for overall health and quality of life. That's why nephrology specialists embrace a holistic approach. Treating kidney problems means considering the whole person and addressing the broader impacts.

Why choose us for nephrology services?

From common conditions to complex issues, our nephrology team delivers personalized, expert care. Some benefits of partnering with us include:

- **State-of-the-art technology:** Advanced diagnostic and treatment tools ensure patients get the treatment needed.
- **Multidisciplinary team:** Our nephrology team collaborates to develop an individualized care plan.
- **Patient-centered:** Our holistic approach promotes kidney function and general health.
- **Expertise and compassion:** Knowledgeable and compassionate specialists improve the patient experience.
- **Streamlined referrals:** A simplified referral process ensures patients receive timely care without unnecessary delays.
- **Educational resources:** Clear, actionable information supports the treatment journey and empowers informed decision-making.

We strive to provide excellent nephrology care within our community. We are proud of the compassionate, expert care our nephrology team offers.

Your Provider Team

Shahid Chaudhary, MD

Nephrology

Missoula, MT

Your nephrology team

Delivering holistic nephrology services is a team effort. The kidney team includes the following experts:

- Nephrologist
- Consulting physicians
- Specialized nurses
- Dietician
- Social workers

These nephrology specialists work together to provide advanced kidney care for your patients. They are **highly trained and dedicated individuals who deliver superior nephrology services**. Our team's unified approach ensures patients receive the expert care they need.

Confidently referring for nephrology services

As a general practitioner, your patients depend on you to guide them. They value your insights and expertise. So, you need easy-to-access nephrology services you can rely on. As *your partner in care*, we aim to support you as you support your patients.

We're proud of our advanced nephrology services and innovative technology. They are **invaluable resources for the patients in our community**. Click the 'Refer' button to begin the process. Together, we can enhance the lives of patients with kidney conditions.

Oncology

Compassionate Care for Cancer Patients

Few words are more difficult to say than “You have cancer.” We understand the extensive impact these words have on your patient’s life. **Cancer changes everything.** That’s why we commit to delivering preventive testing and a high standard of oncology services.

Cancer Care That’s Close to Home

Home — patients going through cancer treatments often long for home. They yearn to sleep in their own beds and enjoy the comfort of friends, family and pets. Spending weeks or months away from home adds stress to an already stressful situation. That’s why our facility strives to **provide a variety of oncology services that are close to home.**

Outstanding Oncology Services

Family physicians, PAs and NPs are at the frontlines in the fight against cancer. Often, these vital medical professionals are the first to observe abnormalities and recommend testing. They **ensure patients receive the right care at the right time.** So, our facility offers a variety of testing and treatment options for your oncology patients.

Diagnostic services

- Mammography ([Locations](#))
- MRI ([Locations](#))
- CT scan
- Radiology
- PET/CT, Nuclear Medicine & Colonoscopy
- High-risk Cancer Screening Program

Oncology treatment

- Surgery
- Chemotherapy
- Radiation
- Radiofrequency ablation

Our staff are here to support you so that you can support your patients. Our screening guidelines, diagnostic scans and oncology services enable **early detection and treatment, promoting better outcomes.**

Healthy Person Program

Not only do we deliver testing and treatment options, but we also offer ongoing support for you and your patients.

Our facility has partnered with the Eon Centralized Management team to deliver the Healthy Person Program.

Utilizing AI technology and a multidisciplinary approach, the team **tracks incidental findings.** This resource helps us *promote early detection, diagnosis and intervention.* Our Healthy Person Program reports abnormal results that could lead to cancer in the following areas:

- Lung
- Pancreas
- Thyroid
- Breast

After reviewing scans and images, the team notifies the patient and PCP about incidental findings while keeping everyone updated on changes. Using this program, we provide recommendations and support while allowing you, the provider, to determine the care plan.

Accredited by the Commission on Cancer

A QUALITY PROGRAM
of the AMERICAN COLLEGE
OF SURGEONS

Community Cancer Care & Prevention has been recognized as an

accredited program by the Commission on Cancer for our advanced clinical care, scientific research and technological inventions.

Meet Your Oncology Team

Because cancer is traumatic, our oncology team provides compassionate, individualized care. With **warmth, dignity and a profoundly relational approach,** our staff provides the care your patients deserve.

Our cancer specialists are trained in treating various cancers with exceptional therapies and up-to-date protocols. We aim to compassionately support patients in their fight against cancer.

Uniting to Provide Compassionate Care for Cancer Patients

From testing to treatment, our staff helps manage cancer care. We holistically support oncology patients with **preventive services, diverse therapies, on-site social services and financial counselors**. Building on your established patient relationship and our outstanding oncology services, we can unite to provide excellent cancer care in our community.

Cancer is stressful. With compassion at our core, we are here to help reduce stress and improve outcomes. Striving to cater to your patients' concerns, our staff seeks to be an invaluable resource for you and your patients.

As the referring physician, you seek to ensure that all your patients receive superior care. You need resources and referral options that you can be confident in. **Our proven service ensures your patients receive exceptional and compassionate oncology care in their community.** Ready to get started? Click the "Refer" button.

Orthopedics

Enhancing Lives with Accessible Orthopedic Services

Joint pain can keep your patient from living their best life. But who can you trust for accessible orthopedic services? Our facility offers a variety of orthopedic services to promote prevention, detection, treatment and rehabilitation in an environment of compassion.

Neck and Back Pain

Back and neck pain **affects more than 80% of adults** at some point in their life. With a column of 33 vertebrae, the spine, which extends from the skull to the pelvis, is often the culprit of debilitating pain.

When evaluating therapy options for the spine, your patient may feel some anxiety. Thankfully, many spine conditions do not require surgical interventions. Our orthopedic specialists are committed to providing pain management and treatment interventions tailored to meet your patient's unique needs. We aim to empower individuals with the tools and resources that promote an active lifestyle.

Joint Pain

Knee injuries and hip pain are common reasons people visit an orthopedic surgeon. Before establishing a plan of care, our orthopedic experts will perform a thorough assessment and any necessary diagnostic tests. After diagnosis, our specialists will discuss treatment options.

Committed to safety and long-term mobility, our providers choose non-surgical therapies whenever possible. Yet, we are certified to perform surgical interventions when necessary.

We offer surgical options for several joint repairs or replacements if non-invasive interventions prove ineffective. Our orthopedic surgeons may recommend surgical treatment if the following conditions apply:

- Joint pain that continues despite compliance with non-surgical therapies
- Loss of significant range of motion
- Joint discomfort during times of rest

- Decreased ability to perform daily or athletic activities

Regardless of treatment modality, we deliver thorough education so patients are informed and on board with the recommended treatment plan.

Hand and Wrist Pain

Hobbies, like gardening or sports, enhance our lives. The effects of a hand or wrist injury can be far-reaching, preventing your patients from doing their favorite activities and limiting athletic performances. Since these common injuries can lead to forearm and elbow pain, our orthopedic specialists are ready and available to treat your patient's hand or wrist injury.

As with all our orthopedic services, we begin with a complete evaluation of the injury and testing that ensures proper diagnosis. Whether or not surgical intervention is necessary, your patients will receive **treatments precisely designed to help them get back to what they love.**

Orthopedic Services Available Near You

Our skilled orthopedics and spine team remain focused on your patient's needs, conditions, and injuries. We are committed to developing a course of treatment to **lessen pain, correct or reduce symptoms, and speed recovery.**

Our hospital offers various orthopedic services, so your patients receive the right treatment at the right time in their community.

Interventional orthopedic services

- Hand and upper extremity services
- Spine and neck services
- Joint replacement surgery
- Partial hip and knee replacement
- Total hip and knee replacement
- Sports medicine

Supportive orthopedic services

- Pain management
- Diagnostic testing
- Imaging resources

- Rehabilitation

What is Robotic-Assisted Surgery?

Robotic-assisted surgery is a surgery performed using a robotic system that can position and manipulate the surgical instruments. The system includes sturdy mechanical arms with flexible instruments attached to them, allowing the surgeon to access the surgical site from a variety of angles and through tiny incisions. A camera arm offers a magnified, 3D view of the surgical site. The surgeon controls the robotic system directly, enabling them to perform surgical procedures more effectively than they could using traditional methods.

VELYS™ Robotic-Assisted Solution for Orthopedic Surgery

At the forefront of orthopedic innovation, the **VELYS™ Robotic-Assisted Solution** is transforming joint replacement by combining advanced technology with the expertise of your surgical team. Designed to work seamlessly with the **ATTUNE® Knee System**, VELYS™ helps ensure a personalized, precise knee replacement — so patients can get back to doing what they love, faster. [Learn how](#) Dr. Frandsen is enhancing surgical precision with the new VELYS Robotic-Assisted Solution.

Benefits of Robotic-Assisted Spine Surgery

Robotic-assisted technology allows surgeons to perform precise and complex procedures through very small openings. With the improved visualization and dexterity offered by robotic systems, the surgeon can individualize the surgery to the patient, confirm final implant positioning, and complete the procedure with reduced blood loss and less damage to the surrounding tissue. This is particularly helpful for patients suffering from complex conditions or injuries affecting the spine and vertebrae.

Benefits for the patient may include:

- Less pain
- Less scarring
- Reduced risk of complications
- Shorter recovery time
- Quicker return to home and community

Meet Your Orthopedic Team

We work with exceptional orthopedic specialists and an experienced spine team to bring you and your patients a wide range of **interdisciplinary orthopedic services**. That's why your patients can access highly qualified orthopedic specialists and surgeons right in their community.

Providing Quality Orthopedic Care

We are passionate and dedicated to providing quality orthopedic services just down the street. As the referring physician, **you hold the key that unlocks the door to better procedural outcomes**. Our staff understands that you

want excellent orthopedic care for your patients. We take our partnerships seriously and are privileged to collaborate with you to provide safe, quality orthopedic care. Referring your patient is easy. Click the “Refer” link to get started.

Pediatrics

Pediatric Services: Supporting Families During Life's Critical Moments

As a devoted physician, you provide superior care for children and families. This commitment is a responsibility we share. That's why we've organized our pediatric services to complement your practice's offerings. From emergency services to newborn care, our dedicated team provides compassionate expertise. Together, we can support families during life's most critical moments, offering comfort when it's needed the most.

Pediatric emergency care

No parent wants their child to need emergency services. But when life happens, we're here. We understand that the ER can be overwhelming for families. That's why our pediatric emergency team offers timely responses and empathetic care. Some specialists that your patients may interact with in the ER include:

- ER physician
- Pediatrician
- Respiratory therapist
- ER nurse
- Specialized lab technicians

From the receptionist to the physician, **we address your patient's needs with age-appropriate expertise.**

Preventive services and routine care

Childhood is the time to build a foundation of health. Our goal is to come alongside families, guiding them toward healthy lifestyles. That's why we offer preventive services like:

- Well-child checkups
- Screenings
- Vaccinations
- Supportive services

Our pediatric services promote growth and development by emphasizing prevention. We aim to support children emotionally, mentally, physically and medically. We long to see all our pediatric patients enjoying a healthy and happy childhood.

Newborn care

The birthing experience is an intense and exhilarating event for parents, often causing worry. Parents want to know that their babies can get the care they need. When partnering with us, your patients have access to the following specialists:

- Neonatologist, pediatrician or neonatal nurse practitioner
- Respiratory therapist
- Newborn nurse
- Lactation consultant
- Speech-language pathologist (assist with feeding)
- Dietician

The newborn specialists work closely with the birthing team, ensuring timely care. We want this experience to be one that families remember, and smile.

Coordinated pediatric care for complex conditions

Families want access to pediatric services that are close to home. Our knowledgeable, experienced staff successfully treat most conditions. However, some situations require a higher level of care. **We prepare for these contingencies and coordinate prompt transfers when necessary.**

This strategy ensures that families can stay home as long as possible. Parents can rest assured that our teams will coordinate care on their behalf. We network with other facilities, so families don't have to.

Advanced respiratory services

Pediatric patients have small airways, increasing their risk of developing respiratory conditions. A child's wheezing and difficulty breathing can send parents rushing to the hospital.

Asthma, croup and RSV are common respiratory conditions affecting our smallest patients. The advanced respiratory specialists take their role as children's advocates seriously. That's why they **work fast, helping to restore breathing and adequate ventilation.**

Why choose us for pediatric services?

Partnering with us means joining a network of professionals who share your devotion to quality health services. We can **improve community health with specialized care teams and a family-focused approach.**

We strive to give your patients the treatment and kindness they deserve. *As your partner in care,* we support your practice with advanced pediatric services. Together, we can make a lasting impact on the lives of the families within our community.

Rehabilitation Services

Enhancing Patient Lives with Comprehensive Outpatient Rehabilitation Therapy

We offer comprehensive outpatient rehabilitation therapy for adults across our facilities. With an experienced staff including Physical Therapists, Occupational Therapists and Speech Language Pathologists, we are ready to help patients get back to their active lives.

Our highly skilled and knowledgeable therapy practitioners specialize in improving the abilities and lives of those affected by injuries, disease, illness, pain, and developmental delays.

Physical Therapy

With our state-of-the-art exercise and rehabilitation equipment, we are able to provide physical therapy services to individuals who have sustained injuries or have limitation in their functional status due to disease, injury or illness. We pride ourselves on providing one-on-one care for each patient by licensed therapists only. We strive to create personalized treatment programs to regain skills and achieve the best possible outcome for a good quality of life.

Conditions that we treat include, but are not limited to:

- Arthritis
- Difficulty in activities of daily living (ADLs)
- Falls
- Generalized weakness
- Lower extremity amputations
- Neck/back pain
- Neurological impairments
- Orthopedic pain/ injures
- Parkinson's disease
- Sports injuries
- Vertigo

Speech Therapy

If your patient suffers from a speech or language problem, it may be hard for them to communicate, participate in daily activities or enjoy their time with others. Highpoint Health Therapy Services located at Highpoint Health – Sumner Station, offers outpatient speech therapy for a variety of patient populations. Speech therapy is the assessment, diagnosis and treatment of speech, language, cognitive communication, voice and swallowing disorders by a speech-language pathologist, so that your patient can achieve a higher level of verbal expression, comprehension and swallowing safety. We are here to help your patients get back to their active lives.

Conditions that may warrant an evaluation:

- Stroke
- Brain mass
- TBI
- Dementia or Alzheimer's disease
- ALS and MS
- Parkinson's disease
- Huntington's disease
- Head and neck cancer

Ready to Get Started?

As a referring provider, you are an important member of your patient's therapy services team. Upon referral, your patient meets with our staff for a consultation. Our team then develops a treatment plan for your patients and informs you throughout the process. For more, information, click 'Refer Now' for our updated contact information.

Surgery

Boldly Transforming Surgical Care

No one excitedly anticipates surgery day. Yet, sometimes, surgical interventions are the best option. With image-guided robotics, patients often experience better outcomes with quicker recovery times. With a drive to improve surgical care, our facility has invested in these technologies.

Community Medical Center provides comprehensive surgical care to patients throughout Montana. From diagnostic procedures to elective and emergency surgery, our team provides round-the-clock care. Surgical procedures and services include:

- Minimally invasive & robotic surgery
 - Gallbladder surgery
 - Breast surgery (benign & malignant)
 - High-risk breast cancer program
 - Genetic education / counseling and testing
 - Melanoma removal
 - Hernia repair
 - Pelvic floor dysfunction (obstructive defecation, rectal prolapse & fecal incontinence)
 - Vein care
 - Anorectal disease
 - Hemorrhoids
 - Colorectal cancer
 - Inflammatory bowel disease (Crohn's Disease, Ulcerative Colitis)

What Is Image-Guided Robotics?

Image-guided robotics are **sophisticated technologies that use real-time imaging obtained from small cameras to aid in minimally invasive procedures**. Surgical interventions have become common, with almost 50 million surgeries performed annually in the United States. However, less invasive techniques are becoming the gold standard.

Using magnetic resonance and ultrasound pictures, medical staff access vivid visualization of the targeted site. Additionally, tiny tools, guided by a skilled surgeon, allow for superior surgical repairs with less internal trauma. The

combination of detailed imaging and small devices enables surgeons to extend their capabilities and successfully perform minimally invasive procedures.

Robotic Surgical Services

Many medical conditions require minor surgeries, which are available as outpatient procedures. Other surgeries require a hospital stay. Regardless of surgery type, we're here to help.

Our surgeons can access the da Vinci Surgical System to perform many of these procedures. This robotic surgical innovation supports our medical staff with **detailed imaging and precise dexterity**, making entry to targeted sites easier.

Benefits of Robotic Surgical Systems

Our facility uses robotic surgical systems to perform minimally invasive techniques. Image-guided robotic technology allows surgeons to *conduct complex, delicate procedures with unmatched precision and reduced internal injury*. Patients and providers rave about the benefits of this robotic innovation.

- **Smaller incisions** lead to *less scarring and infection*.
- **Reduced internal damage** leads to *less pain and blood loss*.
- **Faster mobilization** leads to *shorter recovery times*.

With our surgeon's hands at the helm, we often observe the advantages of image-guided robotics. However, as with all medical procedures, results vary.

Achieving Better Outcomes

Our hospital equips highly trained surgeons with the technology and tools to perform traditional, laparoscopic and robotic procedures. When surgery is necessary, we aim to **support patient recovery with exceptional education, reliable resources and proven protocols**.

We utilize the Enhanced Recovery After Surgery (ERAS) protocol, a multimodal approach to post-surgical pain management. This evidence-based guideline helps decrease postprocedural pain, promote mobilization and reduce narcotic use.

What is Robotic-Assisted Surgery?

Robotic-assisted surgery is a surgery performed using a robotic system that can position and manipulate the surgical instruments. The system includes sturdy mechanical arms with flexible instruments attached to them, allowing the surgeon to access the surgical site from a variety of angles and through tiny incisions. A camera arm offers a magnified, 3D view of the surgical site. The surgeon controls the robotic system directly, enabling them to perform surgical procedures more effectively than they could using traditional methods.

Benefits of Robotic-Assisted Spine Surgery

Robotic-assisted technology allows surgeons to perform precise and complex procedures through very small openings. With the improved visualization and dexterity offered by robotic systems, the surgeon can individualize the surgery to the patient, confirm final implant positioning, and complete the procedure with reduced blood loss and less damage to the surrounding tissue. This is particularly helpful for patients suffering from complex conditions or injuries affecting the spine and vertebrae.

Benefits for the patient may include:

- Less pain
- Less scarring
- Reduced risk of complications
- Shorter recovery time
- Quicker return to home and community

Meet Your Surgical Team

Committing to patient-centric interventions, our surgeons aim for successful and safe procedures. We are **committed to excellence, innovation, and, most importantly, superior patient care.** Not only do our surgeons have access to modern innovations, but our surgical team also has the training required to utilize image-guided robotics.

Progressive Technology and Positive Results

No surgery is routine — at least not to your patient. We understand that. Our full range of surgical options delivers the proper treatment for each patient.

With our eyes on excellence, we strive to demonstrate this drive with **progressive technology and positive patient outcomes**. However, our tools, technology and training are only possible with your collaboration.

Contact us today to learn how we can *work together to transform surgical care*. Referring your patient to our surgical services is easy.

Transfer Center

The Transfer Center Is Back In-house

Community Medical Center is pleased to announce the Transfer Center is coming back in-house! We have heard your feedback, and we welcome the opportunity to partner with you in caring for your patients. Our in-house transfer staff is available 24 hours a day, seven days a week and is committed to serving providers and patients.

Information Needed to Expedite Transfer

- Transferring provider's name, facility and contact information for call-back or disconnect purposes
- Patient's name, age, date of birth
- Clinical status
- Fax face sheet to 406.327.4232

How it Works

1. Our House Supervisor will connect with the appropriate provider to accept the patient.
2. Our House Supervisor will notify you with bed assignment if applicable and contact information for giving report.

For consultations we encourage you to utilize the on-call schedule to connect directly with our on-call specialists.

Call: 406.327.4726

Urology

Aquablation Therapy for BPH Now Available

Community Medical Center is pleased to begin offering Aquablation® therapy. This new, minimally invasive procedure for men suffering from Benign Prostatic Hyperplasia (BPH) provides lasting relief.

What is Aquablation?

Aquablation is a minimally invasive surgical technology for benign prostate enlargement, which uses a heat-free high-pressure water jet to remove obstructing prostate tissue. A recent 5 year randomized controlled trial comparing Aquablation with TURP (long considered the gold standard), found equivalent improvement in flow rate and symptom score with a lower complication rate and a strong safety profile. Its high-speed resection time and potential for preservation of sexual function are major strengths. The procedure can be used to treat prostates of almost any size. In clinical studies, men who had Aquablation therapy had significant symptom relief and very low rate of irreversible complications – incontinence, ejaculatory and erectile dysfunction.

What are the advantages of Aquablation?

- Reduced resection time
- Reduced overall procedure time
- Strong safety profile
- Preservation of key anatomical structures
- Preservation of sexual function
- No ionizing radiation
- Avoids thermal damage
- Histology specimens available

Who qualifies for Aquablation?

Inclusion criteria:

- Moderate to severe lower urinary tract symptoms refractory to pharmacotherapy
- Age > 50 years
- International Prostate Symptom Score > 12

- Maximal flow rate Qmax ≥ 12 ml/s

Exclusion criteria:

- Active infection
- Neurogenic bladder/sphincter abnormalities
- Some prior prostate surgeries
- High anesthetic risk

Success of Aquablation

Aquablation therapy is the only procedure that removes prostate tissue with a robotically controlled heat-free waterjet technology, which minimizes human error in removing prostate tissue and ensures that prostate tissue is removed precisely, consistently and predictably.

- 10/10 men preserved erections
- 9/10 men preserve ejaculation
- 10/10 men preserve continence
- 2x improvement in the flow of urine
- 16-point IPSS improvement (BPH symptom score)

Your Urology Team

As a conscientious provider, you need urology resources you can count on. Our premier urologists excel in diagnosing and treating urinary tract and male reproductive conditions. Our physicians focus on personalized interventions while working collaboratively to produce excellent results.

We are passionate about creating a patient-first environment. That's why we prioritize listening to understand. We want to understand the problem and how the condition affects your patient's life. **With a holistic mindset, our urologists treat not only the problem but the person.**

Women's Health

Women's Health for All Stages

Pregnancy, hormonal changes and menopause – your patients experience many changes throughout womanhood. We're here to deliver personalized care for all these changes, ages and stages.

Convenient and Compassionate Care

With the demands of work, caregiving and family schedules, **your patients are busy**. They need healthcare services that are compassionate AND convenient.

Additionally, many women's health concerns can be personal and private. That's why we aim to treat each woman with individualized consideration and dignity while providing excellent care and support.

Women's Health Services

Whether 25 or 65, we understand that your patient's overall health is vital to them living their best life. We offer women's health services that facilitate **wellness throughout all the stages of womanhood**.

Breast health

By offering **mammograms, breast ultrasounds and biopsies**, we aim to detect abnormalities early and improve outcomes. We approach breast health with sensitivity, so every appointment and procedure is *as comfortable and convenient as possible for your patients*.

Gynecology

Whether your patient needs testing or treatment, we're here to help. Our gynecologic specialists provide compassionate care for a wide range of pelvic disorders. With modern technology and skilled staff, we strive to reduce the stress of women's health concerns.

Minimally invasive surgeries

Surgical techniques and technology have come a long way. With laparoscopic and robotic capabilities, we provide **women's health procedures that often result in less scarring and quicker recovery times.**

Prenatal care

Pregnancy is a life-altering experience. With knowledgeable and caring staff, we are here to support your OB/GYN patients as they prepare for birth and motherhood. Additionally, our OB/GYN specialists are equipped and ready to help with high-risk pregnancies.

Labor and delivery

Every mother has their own unique birth story. With experienced staff, comforting amenities and innovative resources, *we aim to make that story pleasantly memorable.* Our nurses and providers promote safe deliveries, healthy babies and supported moms.

Postpartum care

The days directly after labor can be exhausting and intimidating. We understand how vital those few days in the hospital can be for parental success. Patient education and support promote healthy moms and babies. You can rest assured that we are there to oversee safe recovery, teach infant care, and support mother-baby bonding.

Maternal-Fetal Medicine

Our specialists are equipped and ready to help with high-risk pregnancies, including those with substance use disorder during pregnancy.

Robotics in Women's Health

Sometimes, surgical intervention is the best course of action for your patient. Using image-guided robotic technology, **women often benefit from minimally invasive surgery.** Using tiny tools and detailed imaging, surgeons can perform many procedures that often produce the following benefits:

- Reduced scarring
- Reduced soft tissue damage

- Reduced pain and need for narcotics
- Reduced blood loss
- Reduce hospitalization time

We offer minimally invasive options for many women's health procedures. Our robotic technology helps surgeons enhance their capabilities by improving visualization and dexterity.

Meet Your OB/GYN Specialists

Our OB/GYN specialists understand that women's health preferences are unique. Each woman **deserves care personalized to their individual needs**. That's what makes our women's health services so exceptional.

Wound Care

Advanced, Evidence-Based Wound Management

Our comprehensive approach to wound management utilizes the latest clinical tools and traditional clinical practices. Your patient's individualized treatment plan may include specialized wound dressings, debridement, compression therapy, hyperbaric oxygen therapy, prescription growth factors, advanced cellular products, edema management and non-invasive vascular assessment.

Wound Management Care

Your patient's individualized treatment plan may include specialized wound dressings, debridement, compression therapy, hyperbaric oxygen therapy, prescription growth factors, advanced cellular products, edema management and non-invasive vascular assessment.

Hyperbaric Oxygen Therapy

Hyperbaric oxygen therapy (HBOT) helps the body's oxygen-dependent, wound-healing mechanisms function more efficiently. While enclosed in a clear, large chamber, patients breathe pure oxygen, saturating their blood plasma and allowing it to carry from 15 to 20 times the normal amount of oxygen to the body's tissues. These treatments are provided by physicians who are specialty-trained in hyperbaric medicine as well as our highly trained clinical hyperbaric technicians and staff.

Approved Indications for Hyperbaric Oxygen Therapy

- Diabetic wound of the lower extremities
- Soft tissue necrosis and osteoradionecrosis
- Chronic refractory osteomyelitis
- Compromised skin grafts and flaps
- Actinomycosis
- Crush injury/acute traumatic peripheral ischemia
- Progressive necrotizing infections (necrotizing fasciitis)

Who may benefit from our specialized services?

If your patient's wound isn't healing, they may benefit from the proven, best-practice methodologies at the Wound Care Center. Some of the indications for wound therapy include:

- Diabetic ulcers
 - Neuropathic ulcers
 - Pressure ulcers
 - Ischemic ulcers
 - Venous insufficiency
 - Traumatic wounds
 - Surgical wounds
 - Vasculitis
 - Burns
 - Peristomal skin irritations
 - Other chronic, non-healing wounds
