Cardiology

Shaping Cardiology with Innovation and Excellence

Cardiac conditions complicate many of your patients' lives. Sometimes, patient education, lifestyle modifications and pharmaceutical interventions are just not enough. **When your patients need cardiac care, we're here to help.** We're shaping cardiology services in our community with innovation and excellence.

Cardiac Care in Your Community

We all know the heart is vital to overall health, but maintaining cardiac wellness can be challenging. Our fast-paced lives make eating healthy, exercising and reducing stress complicated. Yet, as a medical provider, you understand how important heart health is.

When heart problems require more than diet modifications, exercise plans and medication therapy, you can count on us for compassionate, innovative cardiac care. We use **image-guided robotics and other innovative technology** to assist our surgeons in performing precision cuts with minimal internal disruption.

Open heart surgery is one option for your patients who require cardiac surgical interventions. However, minimally invasive techniques have positive patient outcomes and are also available in your community.

Traditional and Robotic

Image-guided robotic technologies have paved the way for trained cardiac surgeons to perform procedures with smaller incisions and less internal disruption. Here are some reasons patients and providers are turning to minimally invasive techniques, like percutaneous coronary intervention (PCI):

- Reduced soft tissue injury
- Diminished postoperative pain scores
- Less need for narcotics
- Smaller scarring
- Improved patient satisfaction scores
- Accelerated recovery

With these technological advancements, procedures like PCIs and TAVRs are now available. However, these techniques are not always appropriate. Our trained surgeons **know how to determine the proper approach** to help your patients stay active.

Your Cardiology Team

Our highly skilled, accredited and compassionate heart surgeons have training in various surgical techniques. Not only are they experienced in traditional surgical methods, but they also have expertise in minimally invasive procedures.

Utilizing robotic technology, our surgeons are equipped to perform minimally invasive procedures, typically resulting in improved patient outcomes and decreased internal trauma. Our medical staff will **work closely with you and your patient to create the best treatment plan** because we want to help your patient get back to living life fully.

Our Commitment to Excellence

Our facility and medical staff are dedicated to maintaining the highest standards of cardiac services. Specifically, we are committed to:

1. Maintaining current best practices.
2. Using appropriate surgical approaches.
3. Committing to the gold standard of post-procedural care.
4. Committing to improving patient outcomes.

Our cardiology team prioritizes the patient, so we're dedicated to interventions that are holistic and individualized. We know when minimally invasive methods are appropriate, but we are also aware of when traditional approaches are more advantageous.

Accredited Clinical Capabilities

Ready to Get Started?

We understand the challenges and complexity of cardiac therapy. We're here to support you and your patients. From STEMI care with PCI to cardiac rehab and everything in between, we've got you covered.

As the referring physician, you seek to ensure that all your patients receive superior care. You need resources and referral options that you can be confident in. **Our proven service ensures your patients receive exceptional and compassionate cardiac care in their community.** Ready to get started? Click the "Refer" button.

Imaging

Quality Imaging Services That Are Accessible

Modern medicine depends on radiology and imaging services for establishing informed treatment plans. As a medical provider, you need resources that support your practice. Our facility provides **accurate, dependable and convenient imaging resources** for you and your patients.

Reliable Radiology Services

Radiology testing uses radiant energy to take pictures and visualize many body parts. Our radiologists use these tests to determine a diagnosis and evaluate treatment. Here are some of the tools and tests we use to help establish care plans for your patients.

Mammography

Mammography is an X-ray used to detect and diagnose breast concerns. With **equipment dedicated to these breast exams**, we provide high-quality, low-dose radiation to evaluate breast problems, such as a lump, pain or nipple drainage.

Nuclear imaging

Nuclear imaging is **one of the least invasive and most detailed scans** for diagnosing and monitoring various treatments. This safe and effective testing utilizes a radioactive tracer for clear visualization. A medical professional typically administers the tracer intravenously.

Your patients may be concerned about the terminology “nuclear” or “radioactive,” but patients need to understand that this test is safe, effective and has no side effects. Additionally, the amount of radiation administered is minimal. Common conditions that can benefit from nuclear imaging are the following:

- Blood disorder
- Thyroid disease
- Heart disease
- Gallbladder disease

- Lung problems
- Bone issues
- Kidney disease
- Cancer

After the tracer collects in the tissue, a radiation detector produces digital signals, which are stored on a computer and can be generated to film. Our facility is committed to establishing a safe environment, and *our radiologists are available to answer any questions.*

CT scan

Computerized tomography, or CT scan, is a series of X-ray images that take pictures from different angles around the body. The cross-sectional images help our skilled radiologists visualize blood vessels, bones and other tissue. This **efficient and convenient test allows for quick examination**, especially when the patient is at risk of internal injury or trauma. CT scans help diagnose diseases and plan medical, surgical and radiation therapies.

MRI

Magnetic resonance imaging (MRI) uses magnets and radio waves, processed by computers, to generate images. This noninvasive test utilizes a large, tube-shaped magnet to create cross-sectional images of organs, tissue and the skeletal system. Our knowledgeable radiologists often use this **imaging tool for diseases that CT scans don't detect.**

Ultrasound

An ultrasound, or sonography, produces high-intensity sound waves to visualize structures within the body. This safe and effective test **does not use any radiation.**

We often think of ultrasound during prenatal care. Besides monitoring the uterus, ovaries, and embryos during pregnancy, this test can be used for many other reasons.

- Diagnose gallbladder disease
- Evaluate blood flow
- Guide needles for biopsy or treatment
- Visualize breast lump
- Examine thyroid gland
- Check genital or prostate problems

- Assess joint inflammation
- Determine bone disease

Our well-trained and personable sonographers understand how to manipulate this technology and can put your patients at ease.

X-ray

Our medical staff uses X-rays, or radiographs, for a wide range of injuries, diseases and disorders. Your patients can receive radiographs with or without contrast. Though this test uses a small amount of radiation, it is considered **safe for all ages, including babies**. However, pregnant women should avoid X-rays as they can harm the growing embryo.

Trabecular Bone Score (TBS)

Advancing the Standard of Bone Health

Worldwide, there is one osteoporosis fracture every three seconds. More than 50% of major osteoporotic fractures occur in non-osteoporotic patients. While bone mineral density (BMD) alone is a key factor in assessing fracture risk, it does not identify all individuals who are at high risk of fracture.

What is TBS iNsight™?

TBS iNsight™ is a state-of-the-art software that evaluates bone micro-architecture in patients during a standard DXA scan. This technology is integrated with your patient's DXA scan and provides a full picture of your patient's risk of fracture.

What are the benefits of TBS?

- Identify more patients at risk of fracture by combining TBS with BMD
- Fine-tune therapy decisions and monitor changes in primary and secondary osteoporosis
- Improve patient management

Meet Your Team

Radiology testing has become commonplace for medical professionals. We depend on detailed imaging to make informed diagnoses and treatment plans. However, our team understands that tests can cause fear and anxiety for your patients. That's why we're committed to listening and providing compassionate care.

Our radiology specialists provide a wide range of imaging procedures. We aim to deliver **detailed imaging** to your practice while providing your patient with a **kind and caring experience**. Our radiologists and technologists are truly extraordinary.

Quality and Convenient Imaging Services

We've got you covered, from ultrasound to nuclear imaging and everything in between. We understand the importance of **accurate, accessible and attentive radiology services**. Your patients and practice depend on it.

Our facility and staff strive to provide reliable radiology resources for you and your patients. Our quality radiology and imaging resources are accessible in your community.

Neurosurgery

Needed Relief with Neurosurgery Services

Back and nerve pain are a daily burden for many of your patients. They want and need relief. Our facility provides a wide range of neurosurgical services, including minimally invasive spine surgeries.

Finding Relief

According to the World Health Organization (WHO), **619 million people worldwide suffer from low back pain**. Chronic nerve injury or back pain can limit your patient's activity level and quality of life. When mobility is limited, overall wellness also declines.

Our neurosurgeons diagnose, consult and surgically intervene to help provide reprieve from chronic pain. We are committed to reducing long-term pain levels while increasing mobility. We understand that your patients are ready to return to active lives without all the painful distractions.

Minimally Invasive Spine Surgeries

Our neurosurgeons use **minimally invasive spine techniques to repair vertebral bones and other parts of the spine**.

Compared to traditional surgeries, this less invasive approach uses a smaller incision and equipment to access the targeted site, typically resulting in less harm to nearby muscles, tendons and other soft tissue.

Patients and providers are excited about the benefits of using image-guided robotics for minimally invasive spine surgeries.

- Less pain
- Reduced need for narcotics
- Faster recovery time
- Less scarring
- Diminished risk of infection
- Reduced blood loss

With robotic technology and small tools, surgeons make a tunnel to the targeted location by gently moving muscles and tendons. Specialized microscopes and real-time imaging assist our neurosurgeons by enhancing and extending their capabilities.

Open Spine Surgeries

Not all spine conditions should be treated with the minimally invasive approach. When this technique is not an option, our neurosurgeons may recommend other treatment alternatives, including open surgery with manual manipulation.

With open spine surgeries, a larger incision down the back exposes and allows access to the area. Our staff understands that everyone is unique. Interventions need to be **personalized and patient-centered for the optimal patient experience**. Regardless, our goal for every patient is to deliver the best and safest treatment choice.

Why Choose Us?

Our multidisciplinary team is committed to what counts.

- We deliver individualized diagnostics.
- We provide personalized treatment plans for maximum effectiveness.
- Our team includes board-certified faculty and advanced registered nurse practitioners.
- We listen and prioritize the needs of our patients
- We offer superior neurosurgical services with precision and compassion

Choosing us means choosing a facility that cares as much for your patients as you do.

Meet Your Neurosurgeons

Our spine experts are skilled in neurosurgeries, minimally invasive techniques and image-guided robotics. On initial evaluation, they explore noninvasive therapies before recommending any invasive intervention.

After collaborating with our multidisciplinary team, we will establish a plan to **promote spinal wellness using cutting-edge technology, techniques and interventions**. Regardless of the spine issue, our team is passionate about helping your patients find relief and return to an active lifestyle.

Neurosurgery: Promoting Active Living

Our bodies were made for motion. When pain is present, mobility and activity levels become limited. With our **multidisciplinary approach, innovative technology and knowledgeable staff**, we commit to *helping your patients return to their routine*.

With various surgical options, our spine experts are committed to implementing the right interventions for your patient. With image-guided robotic technology, our facility offers minimally invasive spine surgeries in your community.

As the referring physician, you seek to ensure that all your patients receive superior care. You need resources and referral options that you can be confident in. **Our proven service ensures your patients receive exceptional and compassionate care in their community.** Ready to get started? Click the “Refer” button.

Oncology

Compassionate Care for Cancer Patients

Few words are more difficult to say than “You have cancer.” We understand the extensive impact these words have on your patient’s life. **Cancer changes everything.** That’s why we commit to delivering preventive testing and a high standard of oncology services.

Cancer Care That’s Close to Home

Home — patients going through cancer treatments often long for home. They yearn to sleep in their own beds and enjoy the comfort of friends, family and pets. Spending weeks or months away from home adds stress to an already stressful situation. That’s why our facility strives to **provide a variety of oncology services that are close to home.**

Outstanding Oncology Services

Family physicians, PAs and NPs are at the frontlines in the fight against cancer. Often, these vital medical professionals are the first to observe abnormalities and recommend testing. They **ensure patients receive the right care at the right time.** So, our facility offers a variety of testing and treatment options for your oncology patients.

Diagnostic services

- Mammography
- MRI
- CT scan
- Radiology

Oncology treatment

- Surgery
- Chemotherapy
- Radiation
- Radiofrequency ablation

Our staff are here to support you so that you can support your patients. Our screening guidelines, diagnostic scans and oncology services enable **early detection and treatment, promoting better outcomes.**

Healthy Person Program

Not only do we deliver testing and treatment options, but we also offer ongoing support for you and your patients.

Our facility has partnered with the Eon Centralized Management team to deliver the Healthy Person Program.

Utilizing AI technology and a multidisciplinary approach, the team **tracks incidental findings.** This resource helps us *promote early detection, diagnosis and intervention.* Our Healthy Person Program reports abnormal results that could lead to cancer in the following areas:

- Lung
- Pancreas
- Thyroid
- Breast

After reviewing scans and images, the team notifies the patient and PCP about incidental findings while keeping everyone updated on changes. Using this program, we provide recommendations and support while allowing you, the provider, to determine the care plan.

Meet Your Oncology Team

Because cancer is traumatic, our oncology team provides compassionate, individualized care. With **warmth, dignity and a profoundly relational approach,** our staff provides the care your patients deserve.

Our cancer specialists are trained in treating various cancers with exceptional therapies and up-to-date protocols. We aim to compassionately support patients in their fight against cancer.

Uniting to Provide Compassionate Care for Cancer Patients

From testing to treatment, our staff helps manage cancer care. We holistically support oncology patients with **preventive services, diverse therapies, on-site social services and financial counselors**. Building on your established patient relationship and our outstanding oncology services, we can unite to provide excellent cancer care in our community.

Cancer is stressful. With compassion at our core, we are here to help reduce stress and improve outcomes. Striving to cater to your patients' concerns, our staff seeks to be an invaluable resource for you and your patients.

As the referring physician, you seek to ensure that all your patients receive superior care. You need resources and referral options that you can be confident in. **Our proven service ensures your patients receive exceptional and compassionate oncology care in their community.** Ready to get started? Click the "Refer" button.

Orthopedics

Innovation, Safety and Better Results in Orthopedics

"Nothing seems to be helping." You hear it daily. Knee and hip pain can keep your patient from living their best life. But who can you trust to perform the much-needed surgery? We have invested in **image-guided robotic technology and the training to safely perform minimally invasive techniques** so your patients receive exceptional surgical care.

The Robotic Advantage

Robotic surgeries are producing superior results. However, you understand that proper training is essential for these innovative techniques. Without skilled surgeons, image-guided robotics can do more harm than good. As an informed and compassionate doctor, you want the best for your patients.

With robotic technologies, surgeons can make smaller incisions since they don't need room for bulky equipment and manual manipulation. These surgical innovations come with superior imaging, allowing for clear visualization. These features are especially beneficial during spine and joint surgeries.

The advantage of using image-guided robotics for surgical procedures is *directly related to the smaller incision size and reduced internal injury*. Here are some of the benefits:

- Less bone and soft tissue damage
- Less postoperative pain
- Less need for narcotics
- Less blood loss
- Less scarring

After much research and consideration, we recognized that robotics provide a significant benefit to our patients. Striving for excellence in all we do, our facility has invested in the resources to offer minimally invasive surgeries utilizing robotic technology.

But we didn't stop there. **Our surgeons are highly trained to use image-guided robotics, producing better results for your patients.**

Orthopedic Services Available Near You

Our skilled orthopedics and spine team remain focused on your patient's needs, conditions and injuries. We are committed to developing a course of treatment to lessen pain, correct or reduce symptoms, and speed recovery. Our hospital offers a wide variety of orthopedic services, so your patients receive the right treatment at the right time in their community.

Surgical options

- Arthroscopy
- Hand surgery
- Joint replacement surgery
- Partial knee replacement
- Robotic-assisted hip and knee replacement surgery
- Spine surgery

Non-surgical options

- Pain management
- Diagnostic testing
- Imaging resources

Meet Your Orthopedic Team

We partner with exceptional medical staff to bring you and your patients a wide range of interdisciplinary orthopedic services – allowing your patients to access local, highly qualified orthopedic surgeons trained in image-guided robotics.

We have gone above and beyond to advance our capabilities, technologies and services so your patients remain safe, active and enjoying life.

Providing Quality Orthopedic Care

Image-guided robotics are no longer something of dreams. These technologies have become a reality and are shaping modern medicine, allowing for *more accessible procedures, faster recoveries and reduced patient harm*.

With highly trained surgeons, we want to partner with you to provide excellent care, resulting in elevated patient satisfaction. **As the referring physician, you hold the key that unlocks the door to better procedural outcomes.** We are privileged to partner with you to provide safe, quality care to your orthopedic patients.

Surgery

Boldly Transforming Surgical Care

No one excitedly anticipates surgery day. Yet, sometimes, surgical interventions are the best option. With image-guided robotics, patients often experience better outcomes with quicker recovery times. With a drive to improve surgical care, our facility has invested in these technologies.

What Is Image-Guided Robotics?

Image-guided robotics are **sophisticated technologies that use real-time imaging obtained from small cameras to aid in minimally invasive procedures**. Surgical interventions have become common, with almost 50 million surgeries performed annually in the United States. However, less invasive techniques are becoming the gold standard.

Using magnetic resonance and ultrasound pictures, medical staff access vivid visualization of the targeted site. Additionally, tiny tools, guided by a skilled surgeon, allow for superior surgical repairs with less internal trauma. The combination of detailed imaging and small devices enables surgeons to extend their capabilities and successfully perform minimally invasive procedures.

Robotic Surgical Services

Many medical conditions require minor surgeries, which are available as outpatient procedures. Other surgeries require a hospital stay. Regardless of surgery type, we're here to help.

Our surgeons can access the da Vinci Surgical System to perform many of these procedures. This robotic surgical innovation supports our medical staff with **detailed imaging and precise dexterity**, making entry to targeted sites easier.

Benefits of Robotic Surgical Systems

Our facility uses robotic surgical systems to perform minimally invasive techniques. Image-guided robotic technology allows surgeons to *conduct complex, delicate procedures with unmatched precision and reduced internal*

injury. Patients and providers rave about the benefits of this robotic innovation.

- **Smaller incisions** lead to *less scarring and infection*.
- **Reduced internal damage** leads to *less pain and blood loss*.
- **Faster mobilization** leads to *shorter recovery times*.

With our surgeon's hands at the helm, we often observe the advantages of image-guided robotics. However, as with all medical procedures, results vary.

Achieving Better Outcomes

Our hospital equips highly trained surgeons with the technology and tools to perform traditional, laparoscopic and robotic procedures. When surgery is necessary, we aim to **support patient recovery with exceptional education, reliable resources and proven protocols**.

We utilize the Enhanced Recovery After Surgery (ERAS) protocol, a multimodal approach to post-surgical pain management. This evidence-based guideline helps decrease postprocedural pain, promote mobilization and reduce narcotic use.

Meet Your Surgical Team

Committing to patient-centric interventions, our surgeons aim for successful and safe procedures. We are **committed to excellence, innovation, and, most importantly, superior patient care**. Not only do our surgeons have access to modern innovations, but our surgical team also has the training required to utilize image-guided robotics.

Progressive Technology and Positive Results

No surgery is routine — at least not to your patient. We understand that. Our full range of surgical options delivers the proper treatment for each patient.

With our eyes on excellence, we strive to demonstrate this drive with **progressive technology and positive patient outcomes**. However, our tools, technology and training are only possible with your collaboration.

Contact us today to learn how we can *work together to transform surgical care*. Referring your patient to our surgical services is easy.

Urology

Urology Services with Excellence and Dignity

Patients often feel uncomfortable talking about incontinence or erectile dysfunction. Consequently, they avoid much-needed treatment because of embarrassment. Your patients need urology services with dignity. We commit to delivering excellent urology services with compassion, discretion and sensitivity.

Exceptional Urology Services

When you partner with us, you get **exceptional urology services and a multi-disciplinary team**. Our urologists specialize in diagnosing and treating urinary tract conditions and male reproductive problems. Some urology conditions our team treats include:

- Urinary incontinence
- Overactive bladder
- Urinary tract infections (UTIs)
- Kidney stones
- Benign prostate hyperplasia (BPH)
- Erectile dysfunction
- Hematuria
- Urologic cancers, including prostate, bladder, kidney and testicular cancers

We are passionate about collaboration because a team approach produces superior results. That's why we take a multi-disciplinary approach to all our urology services. Regardless of diagnosis, we coordinate care with you, the oncologist, the cardiologist, or other providers to ensure exceptional care for your patients.

Improving Results with Innovation

More than 50% of men experience benign prostatic hyperplasia (BPH) after the age of 60. For decades, surgeons have used transurethral resection of the prostate (TURP) to treat BPH. However, Aquablation is an innovative, minimally invasive technique that uses robotic technologies to treat BPH. Some of the benefits of using Aquablation include:

- Protection of male anatomy
- Conservation of sexual function
- Less resection and procedural time
- High safety ratings
- No need for ionizing radiation
- No thermal damage

Aquablation produces comparable results to TURP with less irreversible complications, like incontinence, erectile dysfunction and ejaculatory ineptitude. **Men often prefer Aquablation because of the improved net benefits.** Our facility is proud to deliver this sought-after surgery to your male patients.

Your Urology Team

As a conscientious provider, you need urology resources you can count on. Our premier urologists excel in diagnosing and treating urinary tract and male reproductive conditions. Our physicians focus on personalized interventions while working collaboratively to produce excellent results.

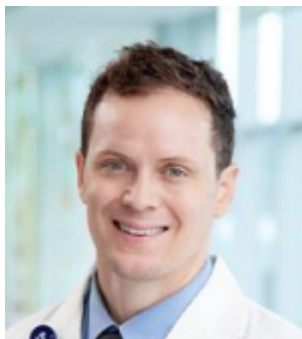

We are passionate about creating a patient-first environment. That's why we prioritize listening to understand. We want to understand the problem and how the condition affects your patient's life. **With a holistic mindset, our urologists treat not only the problem but the person.**

Why Choose Us?

We prioritize patient-centered care. Your patients need a urology team **committed to listening, learning and leading them to a better life without so many genitourinary interruptions.** That's why we advance our techniques while focusing on person-first communication and care.

Your patients are tired of endless bathroom breaks and subpar sexual health. We are here to help preserve their dignity and way of life.

Providing Advanced Urology Services in Your Neighborhood

Many people feel embarrassed to talk about problems they experience in the bathroom and bed. That's why so many postpone treatment. With **empathy at our core, we aim to listen, understand and respond to concerns with dignity and discretion.**

From curing urinary conditions to restoring sexual health, our superior urology team strives to improve your patient's life by addressing annoying genitourinary conditions. Contact us to learn how we can bring excellent urology services to your patients. Click the "Refer" button to get started today.

Women's Health

Women's Health for All Stages

Pregnancy, hormonal changes and menopause – your patients experience many changes throughout womanhood. We're here to deliver personalized care for all these changes, ages and stages.

Convenient and Compassionate Care

With the demands of work, caregiving and family schedules, **your patients are busy**. They need healthcare services that are compassionate AND convenient.

Additionally, many women's health concerns can be personal and private. That's why we aim to treat each woman with individualized consideration and dignity while providing excellent care and support.

Women's Health Services

Whether 25 or 65, we understand that your patient's overall health is vital to them living their best life. We offer women's health services that facilitate **wellness throughout all the stages of womanhood**.

Breast health

By offering **mammograms, breast ultrasounds and biopsies**, we aim to detect abnormalities early and improve outcomes. We approach breast health with sensitivity, so every appointment and procedure is *as comfortable and convenient as possible for your patients*.

Gynecology

Whether your patient needs testing or treatment, we're here to help. Our gynecologic specialists provide compassionate care for a wide range of pelvic disorders. With modern technology and skilled staff, we strive to reduce the stress of women's health concerns.

Minimally invasive surgeries

Surgical techniques and technology have come a long way. With laparoscopic and robotic capabilities, we provide **women's health procedures that often result in less scarring and quicker recovery times.**

Prenatal care

Pregnancy is a life-altering experience. With knowledgeable and caring staff, we are here to support your OB/GYN patients as they prepare for birth and motherhood. Additionally, our OB/GYN specialists are equipped and ready to help with high-risk pregnancies.

Labor and delivery

Every mother has their own unique birth story. With experienced staff, comforting amenities and innovative resources, *we aim to make that story pleasantly memorable.* Our nurses and providers promote safe deliveries, healthy babies and supported moms.

Postpartum care

The days directly after labor can be exhausting and intimidating. We understand how vital those few days in the hospital can be for parental success. Patient education and support promote healthy moms and babies. You can rest assured that we are there to oversee safe recovery, teach infant care, and support mother-baby bonding.

Robotics in Women's Health

Sometimes, surgical intervention is the best course of action for your patient. Using image-guided robotic technology, **women often benefit from minimally invasive surgery.** Using tiny tools and detailed imaging, surgeons can perform many procedures that often produce the following benefits:

- Reduced scarring
- Reduced soft tissue damage
- Reduced pain and need for narcotics
- Reduced blood loss
- Reduce hospitalization time

We offer minimally invasive options for many women's health procedures. Our robotic technology helps surgeons enhance their capabilities by improving visualization and dexterity.

Meet Your OB/GYN Specialists

Our OB/GYN specialists understand that women's health preferences are unique. Each woman **deserves care personalized to their individual needs**. That's what makes our women's health services so exceptional.
